TECHNICAL SKILLS

Programming Languages

- Python
- Java
- JavaScript
- TypeScript
- C#, C

Frontend

- React.js
- HTML5
- CSS3
- Adaptive layout

Backend

- Node.js
- Express.js

Databases

- SQL
- MySQL

Tools: Git, GitHub, Linux

Networking & Security: Wireshark, Nmap, TCP/IP, OSI Model, OSINT Basics

PROJECTS

Restaurant Ordering System (Python)

- Developed a role-based Restaurant Ordering System in Python supporting four user roles (Manager, Customer, Cashier, Chef).
- Implemented persistent order storage, menu management, authentication, and order processing using Python file handling.
- Structured the application into reusable modules, improving code maintainability and reducing duplicated logic.

Frontend Projects (HTML, CSS)

- Developed 5+ responsive web pages from Figma designs using HTML5 and CSS3.
- Implemented mobile-first layouts with reusable UI components and responsive design principles.
- Improved cross-device compatibility across desktop, tablet, and mobile resolutions.

Additional Projects (Java & JavaScript)

- Built multiple Java and JavaScript applications to strengthen object-oriented programming, algorithms, and problem-solving skills.
- Implemented data validation, user input processing, loops, functions, and modular application design.

Python Honeypot

- Developed a Python-based SSH/Telnet Honeypot capable of capturing login attempts, simulating shell commands, and logging attacker activity for security analysis.

PROFILE

Software Engineering student at Asia Pacific University with hands-on experience developing full-stack applications using Python, JavaScript, Node.js, React, and SQL. Built multiple academic and personal software projects, including role-based systems, REST APIs, responsive web applications, and networking tools. Passionate about software engineering, scalable systems, and solving real-world problems through clean and efficient code.

EDUCATION

Asian Pacific University (APU)
Diploma in Software Engineering
(In Progress) | CGPA 3.0

Sep 2024 to Sep 2026

Experience

System Administrator Assistant

Sirius Class | 2024 January – 2024 August

- Managed and maintained SQL databases to ensure data integrity and system reliability.
- Performed system administration, troubleshooting, and technical support for hardware and software issues.
- Assisted with database management, backups, and performance optimization.
- Monitored system performance and resolved technical issues to minimize downtime.
- Collaborated with team members to improve internal IT processes and system efficiency.
